COMP3700: Web Application Development
Spring 2024/ Course Project

General Description:

The purpose of the course project is to progressively develop a website using the skills and best practices you learned in this course.

The website must have three important features:

- A theme (i.e. subject). Develop a new website of interest to you. Decide on a topic with your project teammate. Choose a topic that will allow users to interact with your website. Each team will work on a distinct topic.

- A uniform look and feel that emphasizes the identity and focus of your website topic.

- Well-defined content, structure, and navigation.

Your website will contain some pages, including a home page (*named index.html*) and an "**About us**" page that describes your identity and contact info as a website owner or organization. The Website should contain Web pages, allowing the users to <u>interact</u> with your website. The Website allows users to send you queries via "**contact us"** page.

The project is divided into five parts and will be orally presented on week 15. However, the different milestones are presented as output in parts I, II, II, and IV.

i.   Part 1 - Project Proposal and Google Sites website – (2%) ii.

        Part 2- Static Website using HTML and CSS – (4%)

iii.   Part 3 – Client-side programming using JavaScript and Dynamic HTML – (5%)

iv.   Part 4 – Server-side programming using PHP and Data Base Connectivity using MySQL – (5%)

v.   Part 5 – Oral presentation – (4%)
